Professional Summary

AI Engineer with experience building Generative AI applications, AI agents, backend services, and workflow automation using Python, FastAPI, LangChain, and modern LLMs. Skilled in developing Retrieval-Augmented Generation (RAG) systems, REST APIs, and intelligent automation solutions by integrating vector databases, cloud platforms, and enterprise applications. Passionate about building scalable AI solutions that solve real-world business problems.

Professional Experience

Software Engineer, vTech Solution Inc

June 2025 – Present

Developing AI applications, backend services, workflow automation solutions, and Salesforce applications for enterprise clients.

- Designed and developed AI-powered backend services, REST APIs, and intelligent automation solutions for business workflows.
- Built Retrieval-Augmented Generation (RAG) pipelines, AI agents, and document processing solutions using vector databases, OCR, and semantic search.
- Automated business processes using Microsoft Power Automate, UiPath, Microsoft Copilot Studio, and n8n, reducing manual effort through workflow automation.
- Developed secure backend services with authentication, role-based access control, containerization, and cloud deployment.
- Integrated PostgreSQL, MySQL, MongoDB, Salesforce, and third-party APIs to build scalable AI and business applications.

Projects

Project: RAG Pipeline

- Developed a hybrid Retrieval-Augmented Generation (RAG) pipeline using Python, LangChain, ChromaDB, BM25, Hybrid Search, Reciprocal Rank Fusion (RRF), and Cohere Rerank to generate accurate responses from enterprise documents.
- Optimized retrieval across **10K–50K documents**, achieving **20–40 ms** retrieval latency and approximately **1–2 second** response time through hybrid retrieval and reranking.
- Improved pipeline security through prompt validation, retrieval filtering, response moderation, and output validation to mitigate prompt injection, jailbreaks, retrieval poisoning, and sensitive data leakage.

Project: AI Proposal Bot

- Developed a multi-agent AI application using FastAPI, Azure OpenAI, Llama APIs, and Microsoft Copilot Studio to automate proposal analysis, requirement extraction, compliance validation, and proposal generation.
- Built document processing workflows supporting OCR, PDF/DOCX parsing, Retrieval-Augmented Generation (RAG), prompt engineering, RBAC, and SSO integration.
- Reduced proposal preparation effort by approximately **60–70%** through AI-powered workflow automation.

Project: AI Resume Harvesting

- Developed an automated candidate sourcing workflow using Power Automate, n8n, Azure OpenAI, Google Gemini, Google Custom Search Engine (CSE), and Ceipal Webhooks.
- Automated job requirement analysis, Boolean/X-Ray search generation, resume collection, candidate tagging, and profile ingestion across multiple sourcing platforms.
- Built browser automation and RPA workflows using UiPath, Power Automate Desktop, REST APIs, and MySQL to process and organize over **30K candidate profiles**.

Project: PID Salesforce Case Management

- Developed a Salesforce application for the Pennsylvania Insurance Department (PID) to automate the Independent External Review (IER) process.
- Implemented workflow automation, approval processes, SLA tracking, document management, audit logging, and secure user access using Salesforce Experience Cloud.
- Improved collaboration between insurers, MCOs, IROs, and internal teams through centralized case management and automated workflows.

Project: AI Resume Formatter

- Developed a FastAPI application using Ollama to automate resume parsing, information extraction, and structured JSON generation from PDF, DOC, and DOCX documents.
- Built automated formatting workflows to convert unstructured resume data into standardized recruiter-ready templates.
- Reduced manual resume formatting effort by approximately **90–95%** using AI-powered document processing.

Technical Skills

Programming Languages: Python, SQL, JavaScript, Go

AI, Generative AI & Machine Learning: Generative AI, LLMs, AI Agents, Agentic AI, Retrieval-Augmented Generation (RAG), LangChain, LangGraph, MCP, Prompt Engineering, Context Engineering, Embeddings, Semantic Search, Hybrid Search, BM25, Reranking, Intelligent Document Processing (IDP), OCR, Hugging Face Transformers, NLP, Machine Learning, Deep Learning, TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, OpenCV, MLOps

Backend, APIs & Databases: FastAPI, Flask, REST APIs, gRPC, Webhooks, PostgreSQL, MySQL, MongoDB, Redis, Neo4j, ChromaDB, Firebase Firestore, Vector Databases

Cloud, DevOps & Automation: Docker, AWS EC2, CI/CD Pipelines, Git, GitHub, ETL Pipelines, Microsoft Power Automate, Microsoft Copilot Studio, UiPath, n8n

Developer Tools: Playwright, Selenium, Postman, Salesforce, Jira

Computer Science Fundamentals: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Low-Level Design (LLD), System Design

Education

Rajasthan Technical University (RTU), Kota

Nov 2021 – May 2025

Bachelor of Technology (B.Tech), Electrical Engineering

CGPA: 8.62/10

Certifications, Leadership & Achievements

- Salesforce Certified Administrator | Salesforce Certified Associate
- Copado Fundamentals I (SFP) | Copado Fundamentals II (SFP)
- Salesforce Trailhead Mountaineer with **25+ badges** and **18,000+ Trailhead points**
- HackerRank: **5-Star SQL** | Advanced SQL Certified
- Solved **80+** Data Structures & Algorithms problems on LeetCode
- **Technical Head & Advisor**, Student Activity Center (RTU) — Led technical initiatives, organized workshops, mentored student teams, and coordinated institute-level technical events.
- **Secretary**, Robotics Club (RTU) — Organized robotics workshops, technical competitions, and hands-on training sessions.
