ishurbt1@gmail.com | +91 7413966256 | [Linkedin](#) | [GitHub](#)

Summary

AI Engineer experienced in building end-to-end AI automation systems, RAG pipelines, and scalable backend applications using Python, FastAPI, and modern LLM frameworks. Skilled in LangChain, OpenAI, Hugging Face, vector databases, Agentic AI, AI agents and AWS. Developed REST APIs, AI workflows, and RPA solutions using Power Automate, n8n, and Copilot Studio, integrating web scraping and cloud services into intelligent data pipelines. Delivered client projects reducing manual effort by up to 90%. Strong foundation in machine learning, NLP, CI/CD, and MySQL. Salesforce Certified Platform Administrator focused on scalable AI systems.

Experience

vTech Solution Inc

June 2025 – Present

Software Engineer

Project: RAG Pipeline from Scratch

[GitHub](#)

- Built an end-to-end RAG pipeline using Python, LangChain, OpenAI embeddings, ChromaDB, BM25, Hybrid Search, RRF, and Cohere reranking to enable accurate document-based query responses.
- Scaled retrieval to 10K–50K documents, achieving 20–40 ms latency and 1–2 second response time, which reduced manual search effort and improved response relevance.

Project: AI Proposal Bot

[GitHub](#)

- Built an AI-powered proposal assistant using Microsoft Copilot Studio with a multi-agent setup to analyze RFP, RFQ, and RFI documents and generate compliance matrices, gap analysis, proposal outlines, and draft responses grounded in enterprise knowledge base.
- Integrated Power Automate for document ingestion and text extraction with prompt engineering, knowledge retrieval, and API-based workflows, delivering structured, audit-ready outputs for proposal teams.

Project: AI Resume Formatting

[GitHub](#)

- Developed a FastAPI-based application using Ollama APIs to automate resume parsing, data extraction, and structured JSON generation from DOC, DOCX, and PDF files.
- Worked on scaling logic for formatting and template population to generate client-ready resumes, reducing recruiter manual work by 90–95% in live hiring workflows.

Project: AI Resume Harvesting

- Built an AI-driven recruitment automation workflow using Power Automate, Ceipal APIs, Azure OpenAI, Google CSE, and n8n to handle job ingestion, candidate sourcing, and X-ray search generation.
- Designed data pipelines using REST APIs, JSON transformations, and MySQL (ODBC + On-Prem Gateway) to store and track candidate data at scale.
- Used Power Automate Desktop for browser automation and fallback scraping, processing 15–25 jobs/day and 25–40 candidates/job with 30 seconds per profile turnaround.

Project: Candidate Sourcing using n8n

[GitHub](#)

- Created automated workflows in n8n integrating Ceipal webhooks, custom code nodes, Gemini-based query generation, and Google CSE to streamline candidate sourcing.
- Reduced manual effort by automating Boolean and X-ray search creation and added LLM-based enrichment for better candidate matching.

Project: Opportunity Scraper

[GitHub](#)

- Built a web scraping tool using Playwright, Selenium, and BeautifulSoup to collect structured opportunity data from SAM.gov and GovWin with custom filtering.
- Automated CSV/JSON report generation and scheduled email delivery, helping stakeholders track opportunities more efficiently.

1Stop.ai (E-Cell IIT Roorkee)

June 2024 – Oct 2024

Data Science Intern

Project: Spam SMS Detection

[GitHub](#)

- Built an end-to-end SMS spam classification model using NLP techniques and machine learning with Python and Scikit-learn.
- Improved model accuracy from 95% to 97% and achieved high precision, helping enhance spam filtering performance for real-world messaging datasets.

Project: Credit Risk EDA

[GitHub](#)

- Performed exploratory data analysis using Pandas, Matplotlib, and Seaborn to identify patterns in credit data, including relationships between credit score, income, and default risk.
- Applied feature analysis and similarity techniques to support data-driven insights, and built visual dashboards to communicate findings effectively.

Project: AI Skin Analyzer

[GitHub](#)

- Developed a CNN-based skin analysis application using OpenCV and FastAPI to process images and generate real-time condition assessments.
- Built end-to-end functionality including image capture, preprocessing, and structured CSV/JSON outputs for analysis and reporting.

Skills

Programming: Python, SQL, Data Structures & Algorithms, OOP, Low-Level Design (LLD)

AI & LLM: NLP, Retrieval-Augmented Generation (RAG), LLMs, LangChain, Hugging Face, Prompt Engineering, Agentic AI, Embeddings, OpenAI, Azure OpenAI

Backend & APIs: FastAPI, REST APIs, Webhooks, API Development, API Integration, JSON Processing

Automation & Data Pipelines: Power Automate, Copilot Studio, n8n, RPA (Power Automate Desktop), ETL Pipelines, Workflow Automation, Data Processing

Databases: MySQL, PostgreSQL, ChromaDB, Firestore, SQL Server, Vector Databases

Web Scraping: Playwright, Selenium, BeautifulSoup

Tools & Platforms: GitHub, Bitbucket, AWS, CI/CD, Postman, JIRA, Copado (Salesforce DevOps)

Education

Rajasthan Technical University

Nov 2021 – May 2025

Bachelor of Technology (B.Tech), Electrical Engineering

CGPA: 8.62/10

Atomic Energy Central School

Apr 2020 – July 2021

Higher Secondary Education (PCM)

82%

Achievements

- [LeetCode](#) — Solved 80+ DSA problems
- [HackerRank](#) — 5 Star in SQL
- [Salesforce Trailhead](#) — Mountaineer Rank (25+ badges, 18,000+ points)
- **Secretary** — Robotics Club, RTU; organized workshops and technical sessions
- **Technical Head & Advisor** — SAC, RTU; led technical initiatives and mentored teams

Certifications

[Salesforce](#): Salesforce Certified Platform Administrator

[Salesforce](#): Salesforce Certified Associate

[Copado](#): Copado Certified Fundamentals 1 SFP

[Copado](#): Copado Certified Fundamentals 2 SFP

[HackerRank](#): Advanced SQL
